North Yorkshire  
HG3 3BA

### TESTING OF COMPOSITE RAMP MATERIAL

Test carried out to composite floor matting made up from re-cycled PVC. Test carried out on 03/07/15 on behalf of Groundtrax.

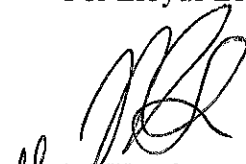

The test piece supplied was placed onto a compression test machine between two pieces of metal plate, one above and one below test piece so load applied was evenly distributed. The depth of the test piece without any load applied measured 75mm. The test carried out was applied in 10T increments – results are as follows:

Original Thickness 75mm

APPLIED LOAD	COMPRESSION RECORDED		
10T	72mm	- 2mm	Returned to original
20T	71mm	- 4mm	Returned to original
30T	67mm	- 8mm	Returned to original

No visible cracks or distortion were found on the test piece.

Yours faithfully  
For Lloyds British Testing Ltd

  
M Wood  
Test Engineer
